First!**

Wired & Wireless Zoom, Focus & Iris Controller that controls virtually any camera & lens!

ZR4

Zoom Focus Iris Controller

The ZR4 from JonyJib is "Made in the USA"! This single controller operates, with one hand, zoom, focus and iris for virtually any camera and lens. This unit's predecessor, the ZR3000, operates professional video and cinema lenses while the ZR4 operates those 'plus' Teleconference, LANC and Panasonic protocols. In addition to the standard wired mode, you can order this system to optionally operate wireless up to 3000 feet (1 km) or more. The ergonomic friendly controller can be operated with either hand and can be mounted on a tripod handle, jib weight bar or just resting on a desktop. Powered by a multi-thread 80MHz microprocessor, this unit runs like a high performance machine.

The industry standard proportional zoom rocker is spring loaded and returns to center. It has an overall speed control setting (red) knob and is also switchable to your direction preference.

The large aluminum knurled focus knob is located under the grip handle and is designed to be operated with your index finger. The focus gear overall travel can be adjusted via the Focus Limit (blue) knob.

Adjacent to the focus knob is the record start/stop (red) button and the return or preview (blue) button. This return button's function is dependent on the features and programming in the host camera.

The Iris adjustment (green) knob and iris gear's overall travel can be adjusted by the Iris Limit (yellow) knob.

You may select Fujinon or Canon zoom protocols via the Fuji/Canon toggle switch.

The unit is powered via a 12vdc 4 pin XLR female power supply connector. The zoom, focus and iris motors, for manually operated lens rings, are powered through a 6 pin XLR extension cable. A 6 pin XLR male to Y cable splits signals into up to three external servo motors at the camera's lens.

An 8 pin circular extension cable feeds signals to video lenses, LANC and Panasonic protocol cameras. Each of the many camera styles are connected via short adapter cables fitted with the appropriate connectors for that particular camera.

When the optional wireless version is ordered, you receive a ZR4W receiver unit with the same output connectors as the main controller. This receiver is also powered via a 12vdc 4 pin XLR female power supply connector. This unit is also fitted with an articulating antenna.

**ZR4 Wired
& Wireless
Version**

Cameras & lenses supported: (and more)

- Fujinon & Canon Servo Zoom and Manual Focus lenses
- Fujinon Teleconference style Servo Zoom & Focus Lenses
- Cinema & DSLR style Manual Zoom, Focus & Iris Lenses
- Sony, Canon & JVC 'LANC' style cameras/lenses
- Panasonic style cameras/lenses (DVX, HVX)

Ordering Information/Accessories:

*ZR4FZ	ZR4 Motorized Focus and Servo Zoom Controller - base unit (add focus gear)
ZR4iM	ZR4 Motorized Iris Lens Assembly (add iris gear)
ZR4ZM	ZR4 Motorized Zoom Lens Assembly (add zoom gear)
